PROFESSIONAL SUMMARY

Senior Java Backend Engineer with 8+ years building scalable microservices and distributed systems for fintech and e-commerce platforms. MSc in Cyber Security and AI (Sheffield, Distinction). Deep expertise in Spring Boot, Kafka, and AWS/Kubernetes for high-availability systems following 12-factor principles. Proven track record of delivering well-tested, fault-tolerant solutions using TDD, BDD, and contract testing in cross-functional Agile teams.

TECHNICAL SKILLS

Languages: Java (11+, 17), Python, Go, Rust, SQL, Bash

Java Ecosystem: Spring Boot (2.x/3.x), Spring Data JPA, Hibernate, Maven, Gradle, functional Java (Streams, Optionals, Lambdas)

Architecture: Microservices, REST APIs (OpenAPI/Swagger), event-driven systems, 12-factor apps, high-availability, high-scalability

Event Streaming: Apache Kafka, Kafka Streams, message queue patterns, event consumers, real-time data pipelines

Cloud and Infrastructure: AWS (EKS, EC2, RDS, S3, Lambda), Docker, Kubernetes, Terraform, cloud-native applications

Databases: PostgreSQL, MySQL, MongoDB, Redis, large SQL databases, query optimization, JPA/Hibernate ORM

Testing: TDD, BDD, JUnit 5, Mockito, Contract Testing (PACT), Cucumber, TestContainers, heavy testing automation

Observability: Datadog, Elasticsearch, Prometheus, Grafana, Micrometer, distributed tracing, log management

CI/CD and DevOps: GitHub Actions, GitLab CI, Jenkins, Maven/Gradle pipelines, peer code reviews, Agile/Scrum/Kanban

PROFESSIONAL EXPERIENCE

Sorvox Groups

April 2022 – June 2024

Senior Java Backend Engineer

- Developed Spring Boot microservices integrating with Apache Kafka for event-driven architectures handling 50K+ daily financial transactions with high availability.
- Built reusable Java libraries and Spring components that simplified real-time Kafka consumption for product teams, reducing integration time by 40%.
- Implemented observability using Micrometer, Prometheus, and Grafana with distributed tracing, achieving defined SLIs/SLOs for all critical services.
- Worked with cross-functional partners in Agile squads to understand requirements and deliver incrementally, improving sprint velocity by 35%.
- Designed event-driven architectures with Kafka Streams and consumer patterns, enabling consistent adoption across 12+ microservices.
- Contributed to code reviews via GitHub PR process, maintained comprehensive JUnit/Mockito test suites, and built Maven-based CI/CD pipelines.
- Deployed cloud-native Spring Boot applications on AWS (EKS) following 12-factor principles, with Docker containerization and Kubernetes orchestration.
- Led team of 8 engineers with TDD practices using JUnit 5 and TestContainers, achieving 88% coverage and reducing production incidents by 65%.

Apricart E-Stores Private Ltd

April 2020 – March 2022

Senior Java Backend Engineer

- Built highly-scalable Spring Boot microservices serving 800K+ daily requests with 99.8% availability using Spring Data JPA and Hibernate.
- Implemented event-driven order processing with Kafka consumers, building JPA entity models for real-time inventory and payment flows.

- Designed REST APIs conforming to OpenAPI standards using Spring MVC, providing clean boundaries between services and external integrations.
- Optimized PostgreSQL queries and implemented Redis caching with Spring Cache abstraction, reducing database load by 40%.
- Implemented TDD with JUnit 5 and Mockito, building integration tests with TestContainers for PostgreSQL and Kafka dependencies.
- Collaborated in Agile squads with Product Owners and QA, delivering incremental improvements through iterative development.
- Built Maven-based CI/CD pipelines with GitHub Actions, providing repeatable builds and consistent deployments across environments.

Creative Drop DMCC

December 2018 – July 2019

Java Backend Engineer

- Developed Spring Boot backend services and REST API integrations for cross-platform data synchronization with 99% accuracy.
- Built REST APIs using Spring MVC handling 400K+ monthly requests with SLF4J logging, exception handling, and Micrometer metrics.
- Participated in code reviews and cross-team collaboration to deliver features spanning multiple microservices.

Chatcloud.co

February 2016 – December 2018

Startup CTO / Lead Engineer

- Built real-time messaging platform with Spring Boot backend, WebSocket support via Spring WebSocket, and JPA message persistence. Delivered MVP in 4 months, scaling to 8K+ users.
- Established DevOps practices with JUnit automated testing, Maven CI/CD pipelines, and AWS infrastructure with auto-scaling.
- Led cross-functional team of 5 with Agile practices, code reviews, and iterative delivery.

KEY PROJECTS

- **Post-Quantum Cryptography Library:** Built multi-language library (Rust, Python, Node.js) with REST/gRPC APIs following OpenAPI standards. Demonstrates building reusable components and clean API boundaries.
- **Event-Driven Data Platform:** Developed Kafka-based tooling for real-time data processing with comprehensive testing and observability.

EDUCATION

The University of Sheffield

Sheffield, UK

MSc Cyber Security and Artificial Intelligence (*Distinction*)

September 2024 – November 2025

- Dissertation: Comparative analysis framework for post-quantum signatures with multi-language library implementation.

PAF-Karachi Institute of Economics and Technology

Karachi, Pakistan

Bachelor of Science in Computer Science

August 2014 – December 2018

- Final project: Full-stack platform with microservices backend, mobile apps, GPS tracking, and real-time messaging.

CERTIFICATIONS

- Offensive Security Certified Professional Plus (OSCP+) Issued: Apr 2025 | Verify

AWARDS AND RECOGNITION

- Offsec.com - The Gauntlet: Top-4 global finisher (forensics and low-level analysis).
- ShefESH Capture The Flag (1st Place): Web exploitation, reverse engineering, and vulnerability analysis.
- Logistic Hunt Speed Programming (1st Place); event lead for COMBAT '18 (100+ participants).
