PROFESSIONAL SUMMARY

Senior Web Developer with nearly 8 years building PHP, API, portal, e-commerce, and web-platform services across SaaS, communications, and operational environments, including 2+ years of commercial Drupal 9/10 delivery. Combines Drupal custom module work, Twig theming, Composer/Drush, configuration management, React/JavaScript frontends, SASS/CSS, Bootstrap/jQuery, REST APIs, WCAG 2.2 AA-aware delivery, requirements capture, user stories, developer mentoring, and production support.

TECHNICAL SKILLS

Drupal, PHP and Open-Source Web: PHP 8, Drupal 9/10, custom module hooks, services, routes/controllers, Form API, entity queries, Views, Twig, Composer, Drush, config export/import, contributed module patching

Frontend and Accessibility Delivery: HTML5, CSS3, SASS, JavaScript, TypeScript, React, jQuery, Bootstrap, responsive layouts, WCAG 2.2 AA checks, semantic HTML, ARIA attributes, screen-reader labels, keyboard/focus checks

APIs, Integration and CMS Operations: REST/JSON APIs, third-party APIs, OAuth2/OIDC, SSO, OpenAPI, PostgreSQL, MySQL, Redis, search/filtering, analytics events, role permissions, audit trails, WordPress/WooCommerce

Delivery, DevOps and Support: Git, GitHub Actions, GitLab CI, Jenkins, Docker, Kubernetes, AWS/GCP/Azure, Linux, automated tests, release notes, incident runbooks, Agile/Scrum/Kanban, requirements workshops

PROFESSIONAL EXPERIENCE

Sorvox Groups

April 2022 – June 2024

Senior Web Developer / Full Stack Technical Lead

- Led Drupal/PHP, React, API, and analytics delivery for client-facing portals and internal tools, improving release predictability through clearer user stories, reusable components, and documented change notes.
- Built custom Drupal modules using hooks, services, routes/controllers, Form API, entity queries, Twig templates, Composer dependencies, Drush commands, and config export/import workflows.
- Improved reviewer and admin journeys from stakeholder feedback, refining navigation, semantic forms, ARIA labels, validation, focus order, error states, and status feedback to materially reduce support clarification.
- Integrated SSO and third-party APIs using OAuth2/OIDC, app registrations, group/role claim mapping, JWT validation, audit trails, and OpenAPI documentation for portal and dashboard services.
- Supported 5 developers through requirements capture, estimation, design reviews, code review, automated testing, deployment notes, and incident runbooks, improving review throughput and release consistency.

Apricart E-Stores Private Ltd

April 2020 – March 2022

Senior Web Developer, IT Department Lead

- Coordinated delivery across a 6-person engineering team building PHP/Laravel, WordPress/WooCommerce, JavaScript, REST API, PostgreSQL, Redis, and AWS services for web, admin, mobile, and operations platforms.
- Rebuilt order, inventory, promotion, delivery, and payment APIs into modular services, supporting high availability during seasonal traffic spikes.
- Developed custom CMS/admin plugins and templates for catalogue, promotion, inventory, support, and rider-management workflows, substantially reducing manual operations work.
- Refined checkout, admin, and operations journeys with responsive layouts, semantic form markup, clearer validation, keyboard/focus checks, error recovery, and support dashboards.
- Added CI/CD, Dockerised services, automated checks, Prometheus/Grafana/ELK monitoring, runbooks, branch protection, peer review, and rollback steps to improve recovery and release reliability.

Creative Drop DMCC

December 2018 – July 2019

Web Developer

- Delivered WordPress/PHP campaign sites, client portals, admin dashboards, REST API integrations, reusable UI patterns, and responsive HTML/CSS/SASS components for communications clients.
- Built and maintained custom themes, plugins, jQuery/Bootstrap interactions, upload/review workflows, content tagging, and approval states, significantly improving content-tagging throughput.
- Containerised services with Docker and Jenkins CI/CD, reducing deployment failures and improving repeatability for client-facing releases.

Chatcloud.co

February 2016 – December 2018

Founding Lead Web Engineer

- Designed and built a real-time customer-support portal with WebSocket APIs, REST services, admin dashboards, reporting, role-based access, and AWS-hosted infrastructure.
- Developed responsive journeys for chat, support queues, feedback capture, user management, and analytics dashboards, sustaining low-latency delivery for thousands of users.
- Implemented authentication, encrypted transport, monitoring, backup/recovery procedures, and incident response, with no recorded data-loss incidents across the platform period.

SELECTED DELIVERY EVIDENCE

- **Drupal portal delivery at Sorvox:** Built reviewer and admin workflows where custom module behaviour, Twig templates, entity queries, Views, permissions, config exports, and support handovers had to stay aligned.
- **Accessible frontend implementation:** Improved forms, dashboards, approval queues, support journeys, and editorial screens using semantic HTML, keyboard flow, ARIA where useful, validation states, and responsive layouts.
- **Service reliability practice:** Separated order, inventory, payment, delivery, and support workflows into clearer API boundaries, then backed releases with CI/CD, monitoring, runbooks, peer review, and rollback steps.
- **Customer and stakeholder communication:** Turned incomplete requests into user stories, acceptance criteria, release notes, demos, support documentation, and follow-up changes agreed with operational users.

RECENT TECHNICAL PRACTICE

- Since completing the MSc, maintaining a public web portfolio and Drupal/PHP practice set covering custom module examples, Twig templates, Composer/Drush notes, content models, Views, roles, and deployment notes.
- Continuing authorised web/API security research focused on OWASP Top 10 issues, authentication weaknesses, authorization gaps, privacy-aware logging, and clear remediation advice.
- MSc dissertation produced a reproducible benchmarking framework after literature review, experimental design, implementation, result comparison, and limitation write-up using Python/Rust/Node.js and REST/gRPC tooling.
- Keeps short technical notes for routing/configuration issues, SSO flows, API error handling, cache invalidation, release rollback, accessibility checks, and stakeholder handover examples.

KNOWLEDGE SHARING, GOVERNANCE & CUSTOMER SERVICE

- Ran requirements workshops, demos, accessibility reviews, release walkthroughs, and support handovers so stakeholders understood what changed, why it mattered, and how to raise follow-up needs.
- Wrote user stories, acceptance criteria, implementation notes, API documentation, deployment checklists, and troubleshooting notes to reduce dependency on single developers.
- Worked within documented approvals, stakeholder alignment, accessibility review, release windows, support handovers, change notes, and consensus-building before implementation.
- Kept practice current through Drupal documentation, open-source release notes, security research, WCAG guidance, developer communities, and mentoring sessions with junior engineers.

EDUCATION

The University of Sheffield

MSc Cyber Security and Artificial Intelligence (*Distinction*)

Sheffield, UK
September 2024 – November 2025

- Focused on secure web systems, trustworthy AI, OWASP Top 10 controls, authentication, API security, privacy-aware logging, reproducible evaluation, and production deployment constraints.

PAF-Karachi Institute of Economics & Technology

Bachelor of Science in Computer Science

Karachi, Pakistan
August 2014 – December 2018

- Final project: full-stack carpooling platform with React Native mobile app, Laravel backend, GPS tracking, chat, notifications, and admin portal.

PROGRAMMING & PROBLEM-SOLVING RECOGNITION

- Logistic Hunt Speed Programming: 1st place, demonstrating algorithmic problem-solving, optimisation, and rapid implementation discipline across constrained programming tasks.
- ACM-ICPC Regional Finals: Fastest-solver recognition for a key programming problem, showing strong data-structure selection, accuracy, and time-bound execution.
- ShefESH Capture The Flag: 1st place, solving web, reverse engineering, and systems-analysis tasks under time pressure with documented reasoning.
